

# Globsyn starts eastern India's largest industry linked engg programme

**G**lobsyn Finishing School, the largest employability linked training program of Eastern India has started its Summer School 2012 recently. This year the courses will be conducted across six locations in West Bengal and Assam.

Starting with a small batch of around 250-300 students in 2004, Summer school now annually trains more than 3000 students from 97 engineering colleges across 14 states in India.

Based on a scientifically researched pedagogy of Knowledge Finishing School System TM, GFS curriculum takes their students through four stages of learning; acquisition, application, managing and performance. Such a learner centric pedagogy ensures that students not only excel in their academics learn-

ing but also increase their employability quotient by giving them relevant life and work skills. Furthermore, during GFS, not only do the students learn through classroom training but also they get an opportunity to interact with like-minded peers coming from 14 states through Globsyn Finishing School's web 2.0 Portal - [www.gfscommunity.com](http://www.gfscommunity.com).

Launched in 2004, under the then Globsyn Practice School brand, in response to the demand for professionally driven technology program tracks for engineering students, Globsyn Finishing School has had a phenomenal growth story riding on the strength of their KFS pedagogy (Knowledge Finishing School System) that is used by their experienced faculty from the industry.
